Given a concurrent schedule answer following questions

1. Is it conflict serializable

2. If it is conflict serializable, does it follow commit order

If the schedule is not conflict serializable then commit order question is not applicable.

Read from standard input and write to standard output.

Submit single file <roll_number>_concurrency.cpp

Consider the given input file.

It describes as concurrent schedule.

At the end your code should print following

Conflict serializable: Yes/No

Commit ordering: Yes/No/Not applicable

No partial marking for this assignment. You will get full marks only if your code produces correct output for all test cases at the time of evaluation.
